

Pipe Flashing (Straight-Wall)

FT-1013TPO TPO

FT-1013PVC PVC

DESCRIPTION

A prefabricated straight-wall (cylindrical) pipe flashing sized to a specific pipe diameter. Unlike the tapered conical boot that fits a range, the straight wrap is matched to a set pipe size for a snug, low-profile fit. The integral membrane skirt heat-welds to the field sheet and a stainless clamp secures the top of the sleeve to the pipe.

FEATURES

- Straight cylindrical sleeve for a snug fit to a set pipe size
- Offered in 2", 3", 4" and 6" diameters
- Factory-welded — consistent and faster than field-built flashings
- Integral membrane skirt heat-welds to the roof
- Available in TPO or PVC; split versions for retrofit over existing pipes

SPECIFICATIONS

Pipe sizes	2", 3", 4", 6"
Membrane	TPO or PVC (60 mil)
Clamp	Stainless steel
Retrofit	Split versions available
Unit	Each

Membrane compatibility: Fixed-diameter pipe penetrations on TPO and PVC single-ply roofs.
