

# Through-Wall Scupper Drain

FTD-1001TPO **TPO**

FTD-1001PVC **PVC**

## DESCRIPTION

A prefabricated edge-drainage flashing for parapet walls. The membrane-clad flange heat-welds to the roof and wall membrane to form a watertight transition, while the open throat carries water through the wall to daylight. Scuppers are sized by the combined dimension of all four sides of the opening.

## FEATURES

- Membrane-clad flange heat-welds to TPO or PVC
- Channels water through parapet walls
- Sized by combined four-side opening dimension
- Available in ranges up to 34" combined
- Pairs with overflow scuppers for code-required secondary drainage

## SPECIFICATIONS

|              |                           |
|--------------|---------------------------|
| Opening      | ≤10" combined (4 sides)   |
| Flange       | Membrane-clad (TPO / PVC) |
| Larger sizes | ≤16", ≤24", ≤27", ≤34"    |
| Unit         | Each                      |

**Membrane compatibility:** Parapet-wall edge drainage on TPO and PVC single-ply roofs.
